B-TEK Scales fabricates a Clydesdale Floor Scale for a multi-purpose application

July 14, 2010

B-TEK Clydesdale Floor Scales can be fabricated in many sizes and capacities for different scale needs. Above ground or pit type Clydesdales are available with optional ramps, bump ramps, detachable or integral columns and many indicator options. B-TEK Scales dealer, Dave Arnold with Advanced Weighing Systems, Inc. of Addison, IL was the key component facilitating this project.

The Customer - Steel Processing Warehouse

The Challenge -Weighing materials for stock and shipment at the same time.

The Solution -B-TEK Scales created a 4 x 7 Custom Clydesdale floor scale that would fit over an existing floor scale where stock materials were weighed using a steel bar holder on top of the scale. Materials from this holder needed for shipment were then transferred to steel bar holder on the other scale. Both scales were able to weigh the unused stock materials and shipment materials at the same time.
