The Brechbuhler Scales' Youngstown, Ohio branch is completing the foundation construction for old Thurman scales that we relocated for D&I in Sheffild PA. This was the first job for the location and their first sand load-out facility which was completed in 2007. They have since grown to multiple locations and have, to date, purchased nine B-TEK truck scales. The largest facility is in Werllsboro and as this area is most central to all drilling. Pittston, Sheffield and Kittanning are satellites locations with much less traffic.

This scale was installed at a rail yard. Sand is brought in via rail and off loaded with a fracking sand, and then unloaded directly from rail to truck. The scale was installed before any other equipment was delivered.

Fracking sand silos

All of the locations have been built near rail. Some of the monies for D&I equipment purchases have been from government grants for railroad improvements.

Replacement foundation

## B-TEK Scales offers scales for a portion of the Marcellus Shale project - continued
