

*A White paper illustrating B-TEK Scales, LLC ability to create custom scale solutions for various industries*

B-TEK Scales is working with a customer who has a scale in the middle of nowhere. The customer needed a way of getting daily reports sent from the particular scale. B-TEK Scales equipped the customer with a Verizon Wireless SIM card installed in a DD 2050 Weighing Terminal to do just that.

The driver pulls onto the scale and enters Truck ID, Product that is being weighed, Destination, and Pickup Number. The DD 2050 system records the weight and the driver has the option to “Save” or “Print” an inbound ticket.

The driver then pulls off the scale to get the truck loaded. When he pulls back onto the scale he enters his Truck ID, and pushes the “Print” button and the DD 2050 system records the weight and prints two copies of the outbound ticket.

At a preset time everyday, the DD 2050, via the Cellular Router with the Verizon SIM card, emails a daily transaction report to the company owner and controller who are 150 miles away from the scale.
