RAIL TRACK SCALE

CUTTING-EDGE TECHNOLOGY
Over 95 years of combined manufacturing experience
Designed for industrial weighing operations that require continuous function and accuracy, the B-TEK Rail Scale is the perfect solution for rail car weighing applications. The Rail Scale ensures reliable, accurate weighing for continuous inbound and outbound deliveries to keep your operations flowing smoothly. Its modular design allows accurate weighing of a variety rail cars in most any rail weighing application.

The B-TEK Rail Scale is empowered by industry-leading fully-digital components. Our digital load cells and indicators are designed to minimize downtime due to repair or calibration. When it comes to performance, uptime and accuracy, nothing compares to a fully-digital scale. We call this the Digital Difference. Fully-digital scales provide lightning resistance, data redundancy stored calibrations and proven long-term measurement stability. They also provide all the data points needed to remotely monitor and troubleshoot your scales through B-TEK Nexia software.

Determining the proper distance between scale modules is important when choosing a rail scale. All rail cars that are to be weighed must be considered. The difference between the wheelbases of the longest car and shortest car governs the selection of scale sizes and their positions.
